Interruption of the LNG storage and regasification site project in Bécancour

Bécancour, August 17, 2017 – Following a review of Hydro-Québec power needs that do not currently justify reinitiating the use of the TransCanada Energy (TCE) power plant, Gaz Métro Energy Solutions has no choice but to interrupt its LNG storage and regasification site project in Bécancour.

The Bureau d'audiences publiques en environnement (BAPE) commission confirmed that the proposed project was safe and that its environmental impacts were deemed minimal. The project made it technically possible to use the TCE power plant, an untapped asset whose usage options the Régie de l'énergie has been requesting Hydro-Québec look into for several years now.
